## Gottfried Wilhelm Leibniz University Hannover (LUH)

### Facts & Statistics

#### Founded

- 1831
- T9 German University

#### Overall Budget (2019)

- 266.7 MEUR

#### Students (2019/20 WiSe)

- 30.196

#### Degree Courses

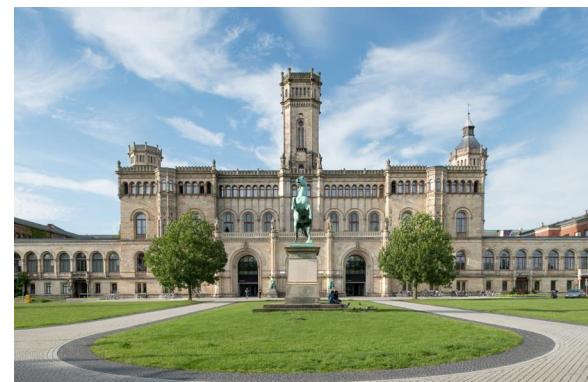

- 84 Degree Programs
- 9 Faculties

#### Staff

- 5.138 Staff
- 3.320 Research and Teaching Staff incl. 348 Professors
- 1.744 Technical and Administrative Staff
- 74 Apprentices

#### Buildings

- 325.720m<sup>2</sup> Floor Space
- 167 Buildings

## Introduction to sustainability

© Leibniz Universität Hannover, Prof. Dr.-Ing. Hans-Josef Endres  
Seite 6 | Institute of Plastics and Circular Economy IKK

## Definition of sustainability

Year	Author/Event	Definition/Declaration
1713	Hans-Carl von Carlowitz "Sylvicultura Oeconomica - Anleitung zur wilden Baumzucht"	Forests to be conserved. People, should save wood, conserve forests by sowing and planting trees, and seek "surrogata" or alternatives to wood. <b>All in all, people should only harvest as much wood as could regrow.</b>
1972	First UN and UNEP world Conference on the Human Environment, Stockholm, <b>Club of Rome</b>	Under the slogan „ <b>Only One Earth</b> “, a declaration and action plan for environmental conservation was published.
1987	<b>Brundtland Report</b>	„Sustainable development is development that meets the <b>needs of present without compromising the ability of future generations</b> to meet their own needs“.
1992	<b>UN Conference on Environment and Development</b> (Earth Summit, Rio)	In the <b>Rio Declaration and Agenda 21 Action Plan</b> , principles of sustainable development and the framework for future tasks were established
2000	United Nations	Declaration containing eight Millennium Development Goals (MDGs) set by 2015.
2015	<b>UN Sustainable Development Summit</b> , New York	The UN 2030 Agenda for Sustainable Development was published, setting up <b>17 Sustainable Development Goals</b> which should be achieved by 2030.

## Definition of sustainability

### Sustainable Development Goals

© Leibniz Universität Hannover, Prof. Dr.-Ing. Hans-Josef Endres  
Seite 8 | Institute of Plastics and Circular Economy IKK

## Definition of sustainability

### Goal 12 - Sustainable consumption and production - Germany (2021)

SDG 12. Ensure sustainable consumption and production patterns			12.2	Sustainable production <i>Steadily increasing the proportion of sustainable production</i>	EMAS eco-management	5,000 locations of organisations by 2030										
12.1.a	Sustainable consumption <i>Making consumption environmentally and socially compatible</i>	Market share of products certified by publicly managed eco-labelling schemes (in future: market share of products and services bearing trustworthy and demanding eco- and social labels)	Increase the market share to 34 % by 2030													
12.1.ba	Global environmental impact by private household consumption – use of raw materials	Steady reduction			Paper bearing the Blue Angel label as a proportion of the total paper consumption of the direct federal administration	Increase the proportion to 95 % by 2020	-									
12.1.bb	Global environmental impact by private household consumption – energy consumption	Steady reduction			CO <sub>2</sub> emissions of commercially available vehicles in the public sector	Significantly reduce	-									
12.1.bc	Global environmental impact by private household consumption – CO <sub>2</sub> emissions	Steady reduction			<table border="1"> <thead> <tr> <th>Status of the indicators</th> <th></th> <th></th> </tr> </thead> <tbody> <tr> <td> Goal is (almost) reached</td> <td></td> <td>Development is heading in the right direction, but a gap of more than 20 % will remain</td> </tr> <tr> <td> Development is heading in the right direction, but between 5 % and 20 % of the goal will not be met</td> <td></td> <td>Development is heading in the wrong direction</td> </tr> </tbody> </table>			Status of the indicators			Goal is (almost) reached		Development is heading in the right direction, but a gap of more than 20 % will remain	Development is heading in the right direction, but between 5 % and 20 % of the goal will not be met		Development is heading in the wrong direction
Status of the indicators																
Goal is (almost) reached		Development is heading in the right direction, but a gap of more than 20 % will remain														
Development is heading in the right direction, but between 5 % and 20 % of the goal will not be met		Development is heading in the wrong direction

## Definition of LCA

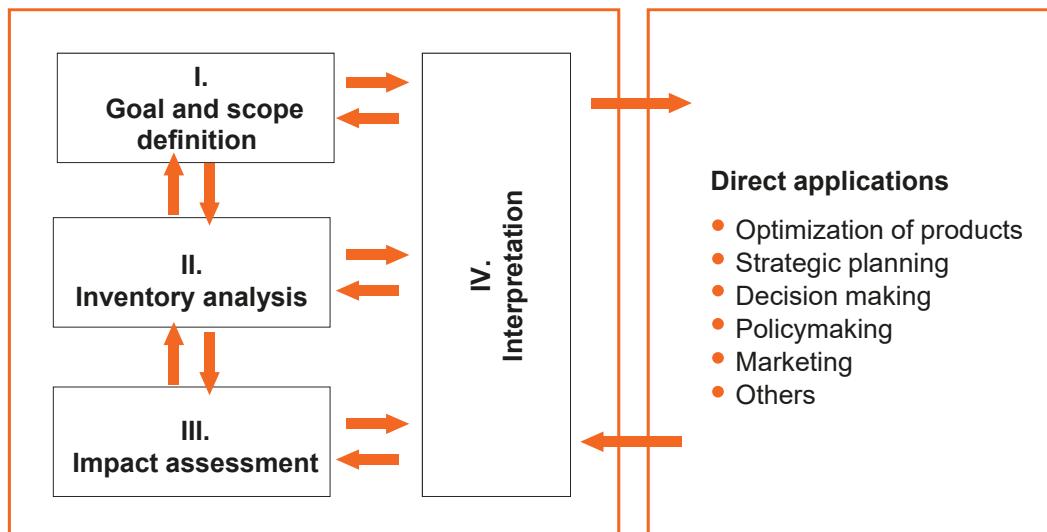

„LCA studies the environmental aspects and potential impacts throughout a product's life (i.e. cradle to grave) from raw material acquisition through production, use and disposal“

## Object of the assessment

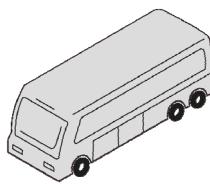

Object of the assessment (functional unit):

Definition: Quantified performance of a product system for use as a reference unit

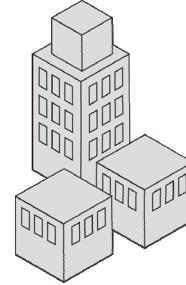

Generate Light

Transport People

House Students

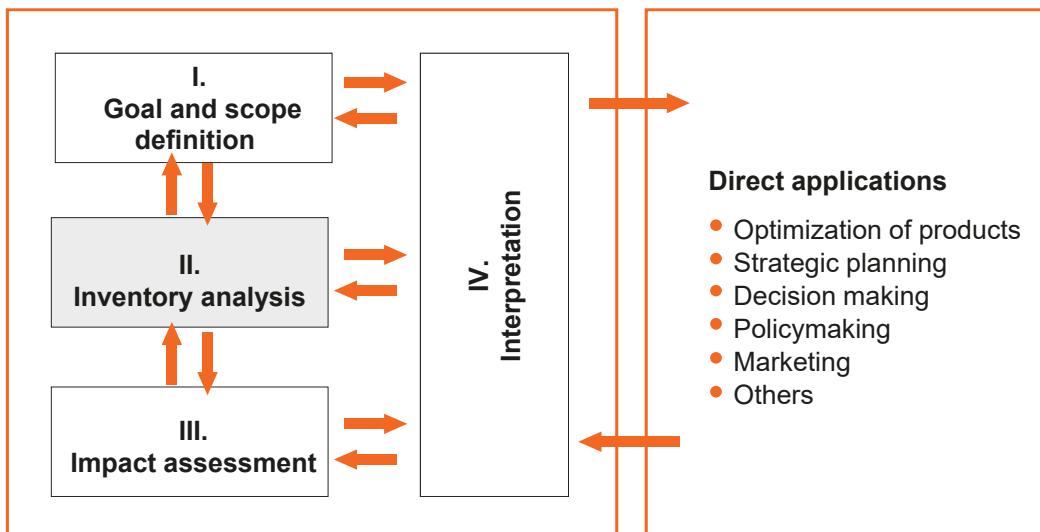

Examples of functional units:

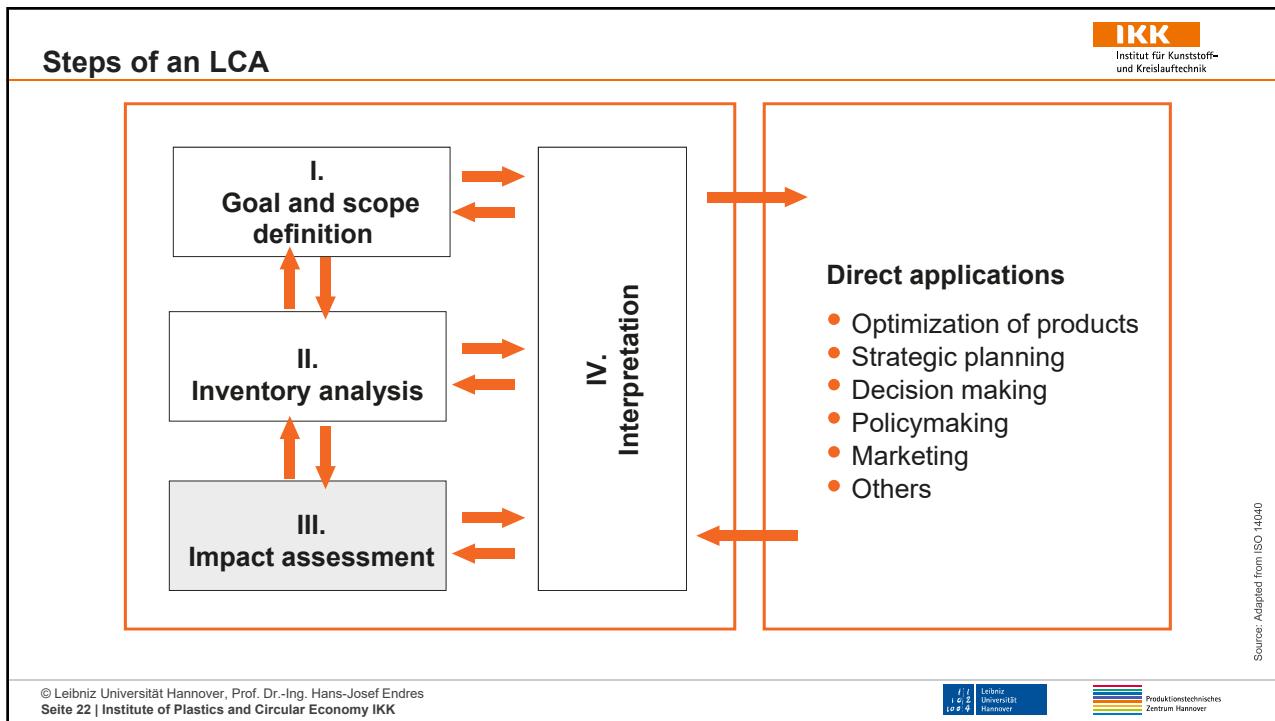

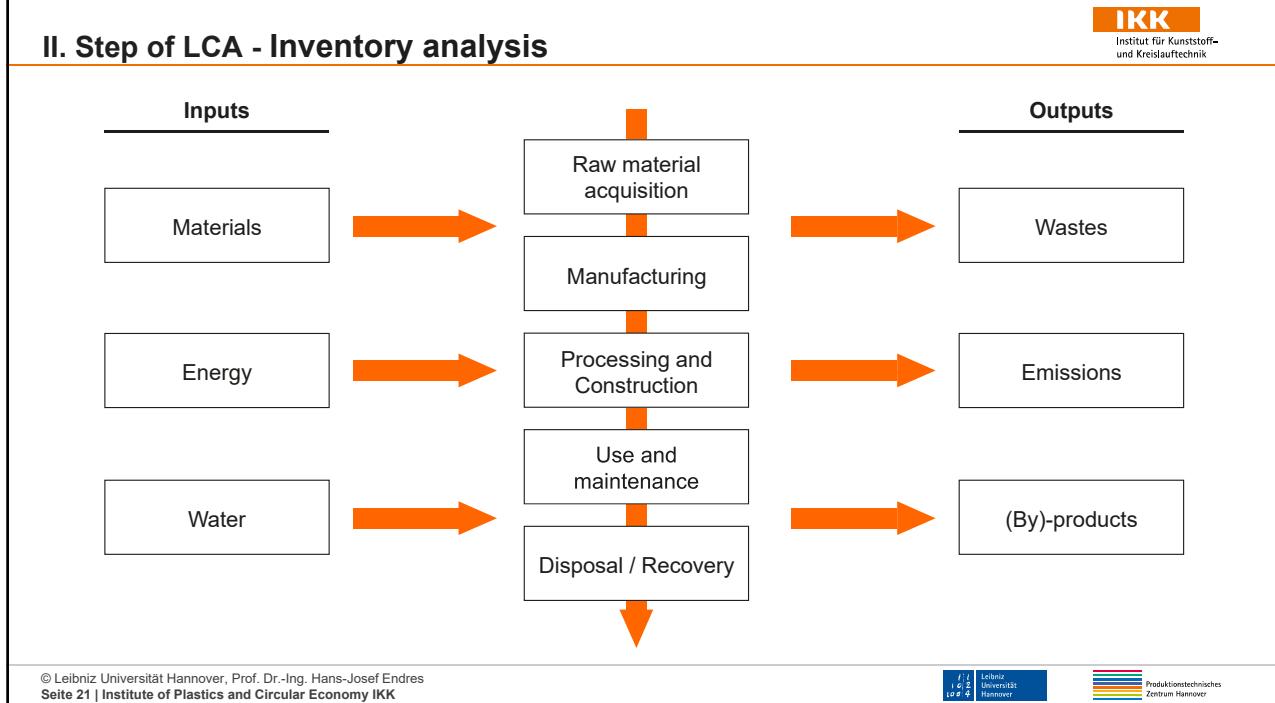

- Light bulb functional unit might be 1,000,000 lumen-hours of light
- Bus functional unit might be 10,000 passenger-kilometer
- Dormitory building functional unit might be house 200 students for one year

Seite 23 | Institute of Plastics and Circular Economy IKK

### Impact categories

Source: EU 2019

Impact category	Impact category Indicator	Unit	Characterization model	Robustness
Climate change, total <sup>1)</sup>	Radiative forcing as global warming potential (GWP100)	kg CO <sub>2</sub> eq	Baseline model of 100 years of the IPCC (based on IPCC 2013)	I
Ozone depletion	Ozone Depletion Potential (ODP)	kg CFC-11 eq	Steady-state ODPs as in (WMO 2014 + integrations)	I
Human toxicity, cancer <sup>2)</sup>	Comparative Toxic Unit for humans (CTUh)	CTUh	USEtox model 2.1 (Fankte et al., 2017)	III
Human toxicity, non-cancer <sup>2)</sup>	Comparative Toxic Unit for humans (CTUh)	CTUh	USEtox model 2.1 (Fankte et al., 2017)	III
Particulate matter	Impact on human health	disease incidence	PM method recommended by UNEP (UNEP 2016)	I
Ionising radiation, human health	Human exposure efficiency relative to U <sup>235</sup>	kBq U <sup>235</sup> eq	Human health effect model as developed by Dreicer et al. 1995 (Frischknecht et al., 2000)	II
Photochemical ozone formation, human health	Tropospheric ozone concentration increase	kg NMVOC eq	LOTOS-EUROS model (Van Zelm et al., 2008) as implemented in ReCiPe 2008	II
Acidification	Accumulated Exceedance (AE)	mol H <sup>+</sup> eq	Accumulated Exceedance (Seppälä et al. 2006, Posch et al., 2008)	II

<sup>1)</sup> The indicator "Climate Change, total" is constituted of three sub-indicators:  
Climate Change, fossil; Climate Change, biogenic; Climate Change, land use and land use change.

## Impact categories

**IKK**  
Institut für Kunststoff- und Kreislauftechnik

Impact category	Impact category indicator	Unit	Characterization model	Robustness
Eutrophication, terrestrial	Accumulated Exceedance (AE)	mol N eq	Accumulated Exceedance (Seppälä et al. 2006, Posch et al. 2009)	II
Eutrophication, freshwater	Fraction of nutrients reaching freshwater end compartment (P)	kg P eq	EUTREND model (Struijs et al., 2009) as implemented in ReCiPe	II
Eutrophication, marine	Fraction of nutrients reaching marine end compartment (N)	kg N eq	EUTREND model (Struijs et al., 2009) as implemented in ReCiPe	II
Ecotoxicity, freshwater <sup>2)</sup>	Comparative Toxic Unit for ecosystems (CTUe)	CTUe	USEtox model 2.1 (Fankte et al., 2017)	III
Land use	Soil quality index <sup>3)</sup> Biotic production Erosion resistance Mechanical filtration Groundwater replenishment	Dimensionless (pt) kg biotic production kg soil m³ water m³ groundwater	Soil quality index based on LANCA (Beck et al. 2010 and Bos et al. 2016)	III
Water use	User deprivation potential (deprivation-weighted water consumption)	m³ world eq	Available WAtter REmaining (Aware) as recommended by UNEP, 2016	III
Resource use, minerals and metals	Abiotic resource depletion (ADP ultimate reserves)	kg Sb eq	CML 2002 (Guinée et al., 2002) and van Oers et al. 2002.	III
Resource use, fossils	Abiotic resource depletion – fossil fuels (ADP-fossil)26	MJ	CML 2002 (Guinée et al., 2002) and van Oers et al. 2002	III

<sup>2)</sup> Toxicity indicators also have three subindicators „but only the sum of the three shall be reported (characterisation model modified by JRC)

<sup>3)</sup> This index is the result of the aggregation, performed by JRC, of the 4 indicators provided by LANCA model as indicators for land use.

## Ecological Impacts of PP, Bio-PP and r-PP (mechanically recycled) based on 1kg – Cradle to Gate

Source: Compilation of Nassie et. al. (2020) and Moretti et al. (2020)

### Summary

- Recycling plastics is about 50% better than producing virgin materials in all various categories
- Biobased plastics are sometimes better, sometimes worse than petro-based counterparts in the various categories. It depends strongly on the process and the LCA parameters

© Leibniz Universität Hannover, Prof. Dr.-Ing. Hans-Josef Endres  
Seite 28 | Institute of Plastics and Circular Economy IKK

## Zusammenfassung

- Ökobilanzierung bietet einige Freiheitsgrade  
(Systemgrenzen, betrachtetes Produkt, Cut off, Transportsysteme, Energietyp, ...)
- LCA ist das beste Instrument, das wir derzeit zur ökologischen Nachhaltigkeitsbewertung und zur ökostrategischen Weiterentwicklung haben
- Handlungsempfehlung:
  - Zielsetzung für LCA formulieren (Produkt bzw. funktionelle Einheit, Systemgrenzen, Adressat, ...)
  - Erhebung der Primärdaten nur mit Ihrer Mitwirkung
  - Nicht nur CO<sub>2</sub>, sondern möglichst vollständige Bilanzierung (16 Wirkungskategorien)
  - Hot Spot Analyse zur Verbesserung der eigenen Produkte/Prozesse nutzen
  - Frühzeitige Einbindung der Reviewer in den LCA-Prozess
  - LCA-Kompetenz im eigenen Haus aufbauen
